No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

AL356390 linear PRI 18-MAY-2005
Human DNA sequence from clone RP11-344111 on chromosome 1 Contains
the NROB2 gene for nuclear receptor eubfamily 0 (group B, member 2), the 5' end of a novel gene [FLJ12455], the NUDC gene formuclear distribution gene C homolog (A. nidulans), a novel gene (FLJ34633), a ribosomal protein L12 (RPL12) pseudogene, a novel pseudogene (DC2), two novel genes and AL356390.24 GI:21436506
HTG; DC2; FLJ12455; FLJ34633; NROB2; NUDC; RPL12; RPL32.

                                                                                                                                                                                                                                                                                                        Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: vega@sanger.ac.uk clone requeste: clonerequest@sanger.ac.uk clone requeste: clonerequest@sanger.ac.uk cn Jun 17, 2002 this sequence version replaced gi:20218554.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw: SWISSROT; Tr:, TREMBL; Wp:, WORNPEP; Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group.

Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP11-344H11 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

NEDO human cDNA sequencing project supported by Ministry of

Roomony, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of M, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                         1856: contig of 18058 bp in length 1815; gap of 100 bp 18154: contig of 16986 bp in length 1815; 35144: contig of 16986 bp in length 1815; 35244: gap of 100 bp 1816; 54710: contig of 19466 bp in length 1811; 72936: contig of 18126 bp in length 1899; 73036: gap of 100 bp 1889; 92888: gap of 100 bp 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889; 1889;

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMEL, SWI, SWISSPROT; Tr:, TREMBL; Wp:, WORWPEP; Information on the WORWPEP database can be found at http://www.aanger.ac.uk/Projects/C_elegans/wormpep This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

RR23-137122 is from the RPCI-23 Mouse BAC Library constructed by the group of Pieter de Jong.

On Nov 9, 2002 this sequence version replaced gi:22772470.

The sequence in this assembly is a combination of BAC based reads and whole genome shocgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold') within each contig-scaffold') within each contig-scaffold's projects/rat/ projects/ projec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                               8
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA.

On Nov 15, 2002 this sequence version replaced gi:23269749.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlass (http://www.hgsc.bcm.tmc.ed/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig-seaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-seaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (see http://www.hggc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 249406: contig of 249406 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission

Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 13, 2002 this sequence version replaced gi:23267435.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequence and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       83721: contig of 83721 bp in length
83821: gap of unknown length
253567: contig of 169746 bp in length
253667: gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center code: BCM

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

The invention describes a new isolated polynucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of (E) under stringent hybridization conditions; or a to the sequence of (I) under stringent hybridization conditions; or a nucleotide sequence of (I) under stringent hybridization conditions; or a nucleotide sequence of (I) Also described are: a(n) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polynucleotide in the host cell; an isolated polypeptide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide (I) is a polypeptide encoded by (I); or a polypeptide comprising a colymentic hybridizing under stringent conditions with any one of SEQ ID NOS: 1-567; a composition comprising the polypeptide of (3); a method (C for detecting (I) in a sample; a method for detecting the polypeptide of (3); a method (C) in a sample; a method of producing the polypeptide of (3); and a collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising any of the sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide with biological activity, which comprises are fully defined in the specification. The sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide with biological activity, which comprises are fully defined in the specification. The sequences and methods are useful in disponsible for genetic disorders or the riaits, in assessing biodiversity, and for producing many other composition and methods are useful for tracting a disease or disorders or composition and method are useful for careful de sequences. Stroke second method are useful for careful de sease, burns, stroke archimmus disorders viral infertition or careful de sease, burns, stroke archimmus disorders archiments disease, and products dependences archiments, disease, stroke archiments, disease, and penedection o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   103 AGCCCCCACCAAGCCGCCGCACCCGTAGACCCAAGCCCAAGGACCCTGGCCATGGGC 162
